

Mohammed Mubbashir Ahmed

+91-7619562002 — mohdmubbashir71@gmail.com — LinkedIn — GitHub — Portfolio — Bengaluru, India

Summary — Full-stack Software Engineer specializing in scalable healthcare and fintech applications using Next.js, React.js, Node.js, and AI-driven systems. Experienced in distributed system design, microservices architecture, real-time data processing, and performance optimization. Skilled in predictive analytics, PyTorch, and Scikit-learn, with strong expertise in security, data integrity, and high-throughput enterprise workflows.

Technical Skills

Frontend Engineering: React.js, Next.js, TypeScript, JavaScript, Zustand, Redux Toolkit, Tailwind CSS

Backend Engineering: Node.js, Express.js, Fastify.js, RESTful API Architecture, WebSockets, Microservices

Databases & Caching: MySQL, MongoDB, Redis, BullMQ

System Design: Scalable Architecture, Load Balancing,

Concurrency Handling, Caching Strategies, Database Optimization, Microservices Design

AI & Data: Scikit-learn, PyTorch, Transformer Architectures

Cloud & DevOps: AWS, Docker, Jenkins CI/CD

Developer Tools: Git, GitHub, Bitbucket

Experience

HWL (Healthcare Workforce Logistics)

Nov 2025 – Present

Software Engineer

- Contributed to the development of healthcare business intelligence dashboards by integrating Tableau APIs, supporting complex analytical calculations, and implementing caching, lazy loading, and scheduled data refresh mechanisms to improve dashboard performance and data availability.
- Collaborated on scalable data processing and reporting workflows, ensuring reliable ingestion, transformation, and visualization of healthcare workforce and operational datasets for enterprise analytics platforms.
- Contributed to a multi-tenant healthcare analytics platform supporting hospital onboarding, facility management, role-based access control (RBAC), and secure user access management for organization-specific dashboards and reports.
- Assisted in building predictive analytics features using historical healthcare and workforce data to forecast future trends, utilization metrics, and key performance indicators through interactive charts and visualizations.
- Integrated OpenAI-powered report generation capabilities to provide automated insights, executive summaries, and data-driven recommendations, enhancing reporting efficiency and decision-making for healthcare stakeholders.

Neokred Technologies

Feb 2025 – Aug 2025

Full Stack SDE-1

- Architected and optimized enterprise-grade KYC, fraud prevention, and digital onboarding platforms supporting secure identity verification workflows for fintech and banking applications with high-volume user onboarding.
- Engineered high-throughput real-time API orchestration systems and no-code bundle automation capabilities, reducing manual operational efforts by 70% and improving distributed data processing efficiency.
- Developed advanced device intelligence and behavioral analytics solutions including real-time fingerprinting, suspicious activity detection, and cross-platform tracking mechanisms, strengthening fraud detection accuracy and reducing suspicious transaction risks.

Projects

Customer Support Intent Classifier using BERT ([Click here](#))

- Transformer-Based NLP Classification Engine:** Fine-tuned BERT (bert-base-uncased) using HuggingFace Transformers and PyTorch to classify customer support requests across multiple intent categories with contextual language understanding.
- AI-Driven Support Automation:** Engineered an intelligent intent prediction pipeline capable of identifying refund requests, payment issues, complaints, order tracking, and authentication-related queries for chatbot and helpdesk automation systems.

Education

PDA College of Engineering

Aug 2020 – Jun 2024

Bachelor of Engineering in Computer Science

CGPA: 7.91

Al Sharay PU College

Mar 2019 – Apr 2020

Pre-University Course (PUC)

Percentage: 93.67%

Human Age Urdu High School

Mar 2017 – Mar 2018

Class X (SSLC)

Percentage: 81.12%
